WPGC Pace Card

A simple phone tool to help every group keep pace

A guide for West Point Golf Club members, Captains and Captains Table volunteers
Geoff Flamank, WPGC Drawmaster · October 2026

Open the app: wpgc-drawmaster.github.io/pace-card · Free · no login · works offline

Why a Pace Card?

Our pace analysis this fall told a clear story: **spacing, not speed, is the problem.** Most groups play at a reasonable speed. The damage comes from one or two gaps of 14 to 21 minutes opening up behind quicker groups. Once a gap like that opens, every group behind it feels it, and drift usually shows up by around the 10th group of the day.

That also means a fast first group doesn't make a fast field. What makes the day flow is every group staying close to the group ahead.

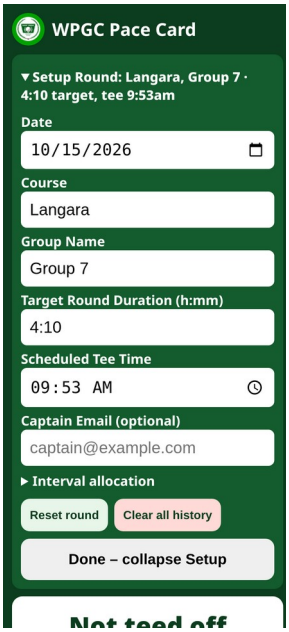

> **The key habit:** Stay close to the group ahead, and assume they're on a 4:00 to 4:10 pace. If you can see a gap opening in front of you, close it.

The Pace Card is a free web app that helps each group keep itself on pace, one stretch of the course at a time. You tap a button when your first tee shot goes, and again after holes 4, 9, 13 and 18. A big banner at the top tells you, at a glance, whether you're on pace, ahead or behind.

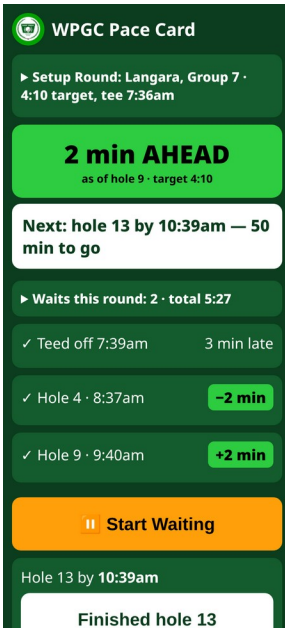

On the course in 60 seconds

1. **Open the Pace Card** on one phone in your group (ideally added to your Home Screen; see below).
2. **Fill in Setup Round** at the top of the screen (it stays yellow until it's ready): course, group name, target round time (type **410** for 4:10) and your scheduled tee time.
3. **Tap "First tee shot hit"** the moment your group's first drive goes.
4. **Glance at the banner.** Green means on pace or ahead. Yellow means a little behind. Red means more than 5 minutes behind.
5. **Tap "Finished hole 4"** as you walk off the 4th green, then do the same after holes 9, 13 and 18.
6. **Waiting on the group ahead?** Tap **Start Waiting**, then **Stop Waiting** when you can play.
7. **After 18, tap "Save & Share Round CSV".** The round goes to the Drawmaster automatically; emailing it to **drawmaster.wpgc@gmail.com** is a backup.

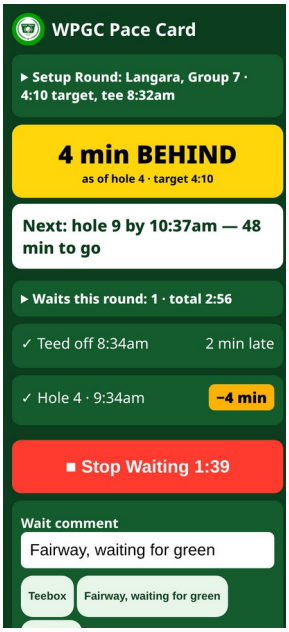

What it looks like

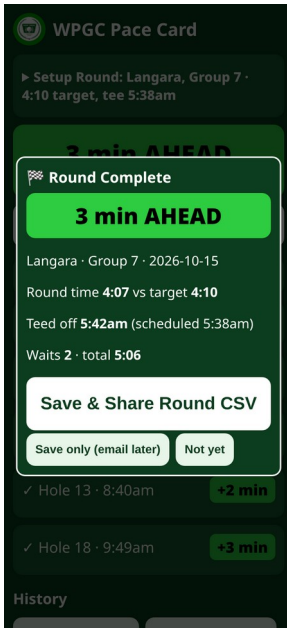

Before you tee off: Setup Round

Mid-round: ahead of pace after hole 9

Slightly behind, timing a wait

Round complete: save and share

Installing the Pace Card on your phone

There's nothing to download from an app store. Open the link once and add it to your Home Screen. After that it opens like any other app, full screen, with the WPGC icon.

iPhone (Safari)

1. Open **Safari** (it must be Safari, not Chrome or another browser).
2. Go to **wpgc-drawmaster.github.io/pace-card** or scan the QR code.
3. Tap the **Share** button (the square with an up arrow).
4. Scroll down and tap **Add to Home Screen**, then **Add**.
5. Open the Pace Card from its new Home Screen icon.

Android (Chrome)

1. Open **Chrome**.
2. Go to **wpgc-drawmaster.github.io/pace-card** or scan the QR code.
3. Tap the **three-dot menu (⋮)** at the top right.
4. Tap **Add to Home screen** or **Install app**, then confirm.
5. Open the Pace Card from its new Home Screen icon.

Scan with your phone camera

Tip: Open the Pace Card once **with a signal before your round** (at home or in the clubhouse). After that it works on the course even with no reception. Updates arrive automatically. If you ever see an old version, remove the icon, reopen the link and add it to your Home Screen again. Your saved rounds stay on the phone.

A closer look at the features

Setup Round

Fill this in on the first tee. It takes about 30 seconds.

Field	What to enter
Date	Today, filled in for you.
Course	Fraserview, Langara, McCleery or Kamloops Golf and Country Club (pick from the list), or type any other course.
Group Name	For example "Group 7".
Target Round Duration	Usually 4:10. Phone keypads have no colon, so just **type 410**.
Scheduled Tee Time	Your time on the draw sheet.
Captain Email (optional)	Recorded in the results file so the Drawmaster knows who sent it.

Setup Round sits at the very top of the screen and opens automatically while it's incomplete. The box stays **yellow** until Course, Target Round Duration and Scheduled Tee Time are filled in, then turns green. Tap **Done – collapse Setup** at the bottom to fold it away, or it folds by itself after you finish hole 4, which keeps the screen clear. Tap it any time to reopen. Two housekeeping buttons only appear when Setup is open, so they can't be tapped by accident:

- **Reset round** clears the setup fields, tee shot, checkpoints and waits for the current round. Your saved history is kept.
- **Clear all history** deletes every saved round on the phone. It asks you to confirm twice.

How the checkpoints are set (Interval allocation)

The round is split into four stretches with checkpoints after **holes 4, 9, 13 and 18** at every course. Hole 9 marks the turn, so drift shows up early, but you're not tapping on every hole. Inside Setup, **Interval allocation** shows each stretch with its par, share of the round and minutes.

Each hole gets a time weight by par: **par 3 = 11 min, par 4 = 14 min, par 5 = 17 min**. A stretch's share is its weight divided by the course total, applied to your target. Checkpoint times run from your actual tee time. Here's Langara at a 4:10 target:

Stretch	Par	Share	Minutes	Due (elapsed)
Tee to 4	16	22.5%	56	0:56
Holes 5 to 9	19	26.9%	67	2:03
Holes 10 to 13	16	22.5%	56	3:00
Holes 14 to 18	20	28.1%	70	4:10
Total	**71**	**100%**	**250**	

McCleery works out the same as Langara (0:56, 2:03, 3:00, 4:10). **Kamloops Golf and Country Club** (par 72) comes to 0:56, 2:05, 3:01 and 4:10. **Fraserview** uses the split from the original Fraserview Pace Card: 0:59, 2:05, 3:01 and 4:10 at a 4:10 target. The percentages can be tuned per course if one stretch plays slower (for example a long walk between a green and the next tee), and the app has a **"How are these calculated?"** explainer.

Where the minutes come from. Only the ratio between par 3, 4 and 5 matters, because the total is always scaled to your target time. Our 11 / 14 / 17 uses the R&A times for par 3s and par 4s, with the par 5 rounded to an even 3-minute step. Sources:

- R&A Pace of Play Manual, Appendix C (four-ball example: 10 / 13 / 16 min for par 3 / 4 / 5)

- Course pars: City of Vancouver scorecards for Langara and McCleery, and the club's Kamloops G&CC hole overview.

First tee shot hit

Tap the big **First tee shot hit** button (with the flag) when your group's first drive goes. The app records your actual tee time and shows how many minutes late or early you were against the draw. From then on, all checkpoint targets run from your actual tee time, so a late start on a busy morning isn't held against your group.

The pace banner and the Next bubble

The big banner just below Setup (it stays pinned at the top as you scroll) shows **X min BEHIND**, **X min AHEAD** or **ON PACE**. It goes live if you pass a checkpoint target without tapping, so it never hides a gap that's already opening. Just below it, the **Next** bubble tells you what's coming, for example: **"Next: hole 9 by 11:59am — 12 min to go."**

Colour	Pace banner	Next bubble
Green	On pace or ahead	(white) Plenty of time
Yellow	1 to 5 minutes behind	Within 5 minutes of the target
Red	More than 5 minutes behind	Past the target time

Finished hole buttons

Tap **Finished hole 4**, **9**, **13** and **18** as you walk off each of those greens. Each finished checkpoint folds to one tidy line showing the time and your plus or minus. Tap it to see **This stretch** (minutes gained or lost since the last checkpoint) and **Round total**. Tapped late or by mistake? Use **Edit** to fix the time or **Undo** to clear it.

Start Waiting / Stop Waiting

Once you've teed off, an orange **Start Waiting** button sits just above the next Finished hole button. Tap it whenever you're standing waiting on the group ahead, and tap **Stop Waiting** when you can play. Add a comment with a quick pick (**Teebox**, **Fairway, waiting for green**, **Par 3 tee**) or type your own. The timer keeps running if you lock your phone. Your waits appear in a list where you can edit or delete any of them. This tells us exactly where on each course groups are getting held up.

Round Complete and sending your results

After hole 18, a **Round Complete** panel shows your final pace, round time against target, scheduled and actual tee times, and your waits. When you save, the round is **sent to the Drawmaster automatically**. A status line shows **Sent to Drawmaster ✓**, or **Will send to Drawmaster when online** if you have no signal; it then goes as soon as the phone is back online. You have three choices:

- **Save & Share Round CSV**: saves the round and opens your phone's Share sheet with the round file (plus a wait log file if you timed any waits). Choose **Mail** or **Gmail** and send it to **drawmaster.wpgc@gmail.com** as a backup copy.
- **Save only (email later)**: saves the round on your phone and sends it to the Drawmaster automatically. You can still email the file from History later.
- **Not yet**: closes the panel. A yellow **Finish round** button brings it back when you're ready.

History

Every saved round appears in **History** at the bottom of the screen. **Share Rounds CSV** sends all saved rounds in one file, and **Share Wait Log CSV** sends all the timed waits. Email is a backup now that saved rounds go to the Drawmaster automatically. Handy if you've been playing a few weeks and want to send everything at once. After saving, your course, group, target and tee time stay filled in, ready for next week.

Tips for your group

- **One person per group runs it.** Agree on the first tee who's keeping the card. One phone is plenty.
- **Glance at the banner at each checkpoint** and share it with the group: "We're 3 behind" is all it takes.
- **Watch the group ahead, not just the clock.** If they're pulling away, pick it up even if the banner is green.
- **If you're behind, close the gap:** play ready golf, hit a provisional ball whenever a ball might be lost, keep ball searches short, and be ready to hit when it's your turn.
- **Time the waits.** A wait isn't your fault, and logging it helps us find the real bottlenecks.

Your privacy

There's no login, no account and nothing to sign up for. Your rounds are stored on your phone. When you **save a finished round**, that round (course, group, times, pace and waits, plus the optional Captain Email) is sent to the Drawmaster's private WPGC Pace Log for club pace analysis. Nothing is sent before you save, and nothing else leaves your phone apart from files you choose to share.

Questions and feedback

I'd love to hear how it works for your group, what's confusing and what would make it better.

Appendix: What's in the results files

Both files are simple spreadsheets (CSV) that open in Excel, Numbers or Google Sheets. All times are local clock times.

Rounds file: one row per round.

Column	Meaning
course, group, captain_email, date	From Setup Round
sched_tee, actual_tee, tee_delay_min	Scheduled and actual tee time, minutes late (negative = early)
target, round_time	Target duration and actual round time (h:mm)
h4, h9, h13, h18	Clock time each checkpoint was tapped
d4, d9, d13, d18	Minutes ahead (+) or behind (negative) at each checkpoint
total_wait_min, wait_count	Total minutes spent waiting and the number of waits

Wait log file: one row per timed wait.

Column	Meaning
course, date, group, captain_email	From Setup Round
sched_tee, actual_tee	Scheduled and actual tee time
wait_no, start, end	Wait number in the round, start and end clock time
wait_mmss, wait_min	Length of the wait (m:ss and decimal minutes)
stretch, comment	Which stretch it happened in (e.g. holes 5-9) and your note
